BASIC NUTRITION & EATING PRACTICES

Instr. ARTEMIO T. REYES, JR., LPT, MAEd
Faculty, Department of Multidisciplinary Studies
College of Management and Multidisciplinary Studies, TUP-Manila

Nutrition

is the process by which the body **uses food** to maintain its **health** and **function**.

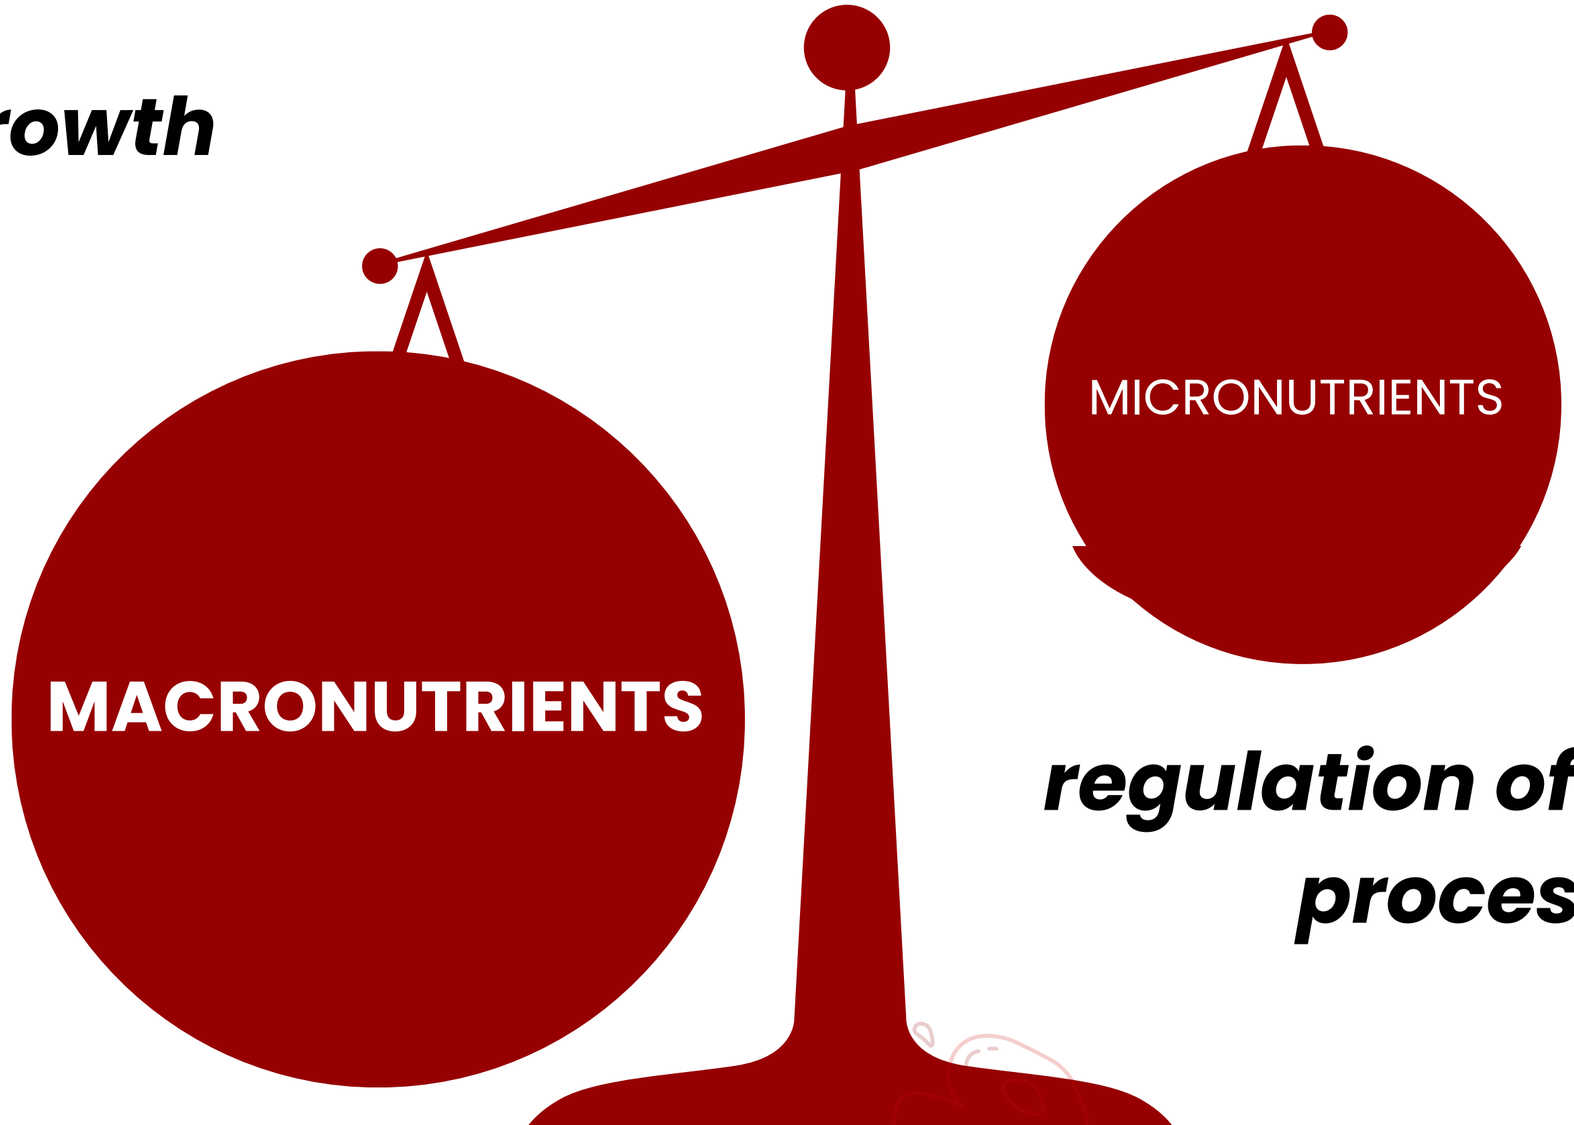

*A **well-balanced diet** provides the body with the*

Six Essential Nutrients

growth

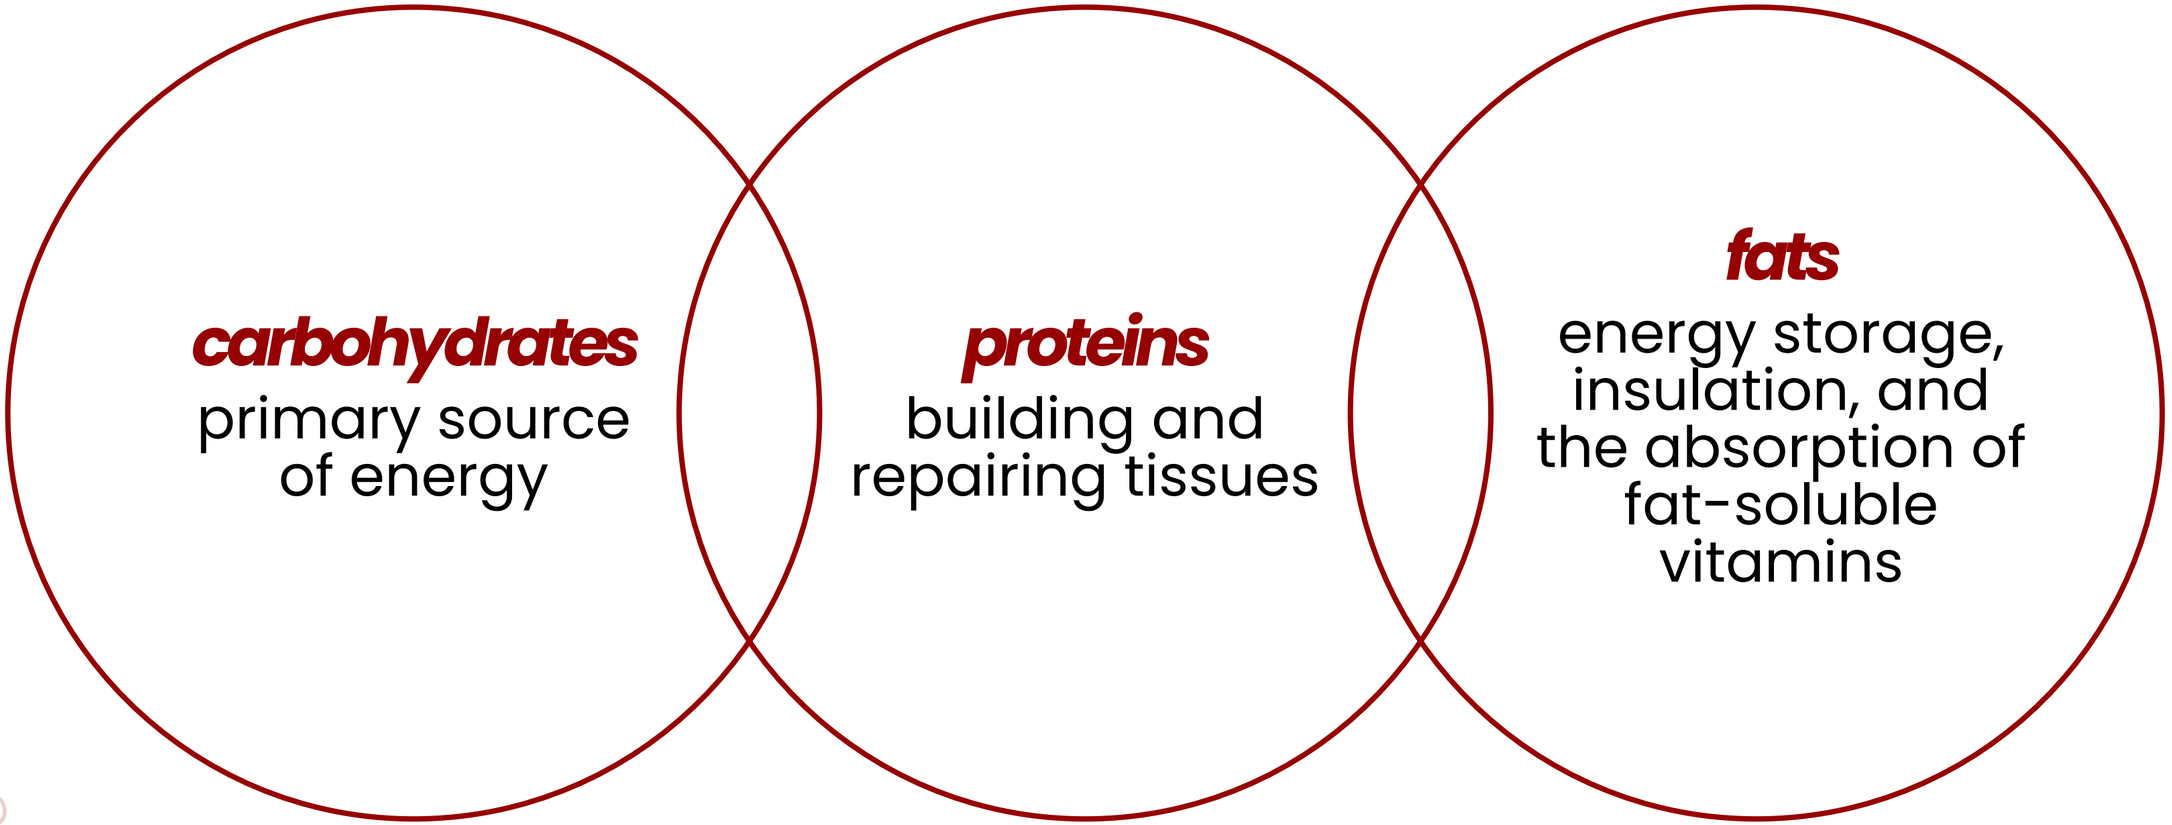

repair

energy production

regulation of all bodily processes

Macronutrients

Carbohydrates

- **primary source of energy**

broken down into **glucose** used by cells for **immediate energy** or stored as **glycogen** in the muscles and liver for later use (Whitney & Rolfes, 2019).

Sources include grains, fruits, and vegetables.

Proteins

- **build and repair tissues**

they also play a vital role in hormone production, enzyme function, and immune response

Complete proteins contain **all nine essential amino acids** and are found in animal products like **meat and eggs**, while plant-based sources include **beans, nuts, and soy** (Whitney & Rolfes, 2019).

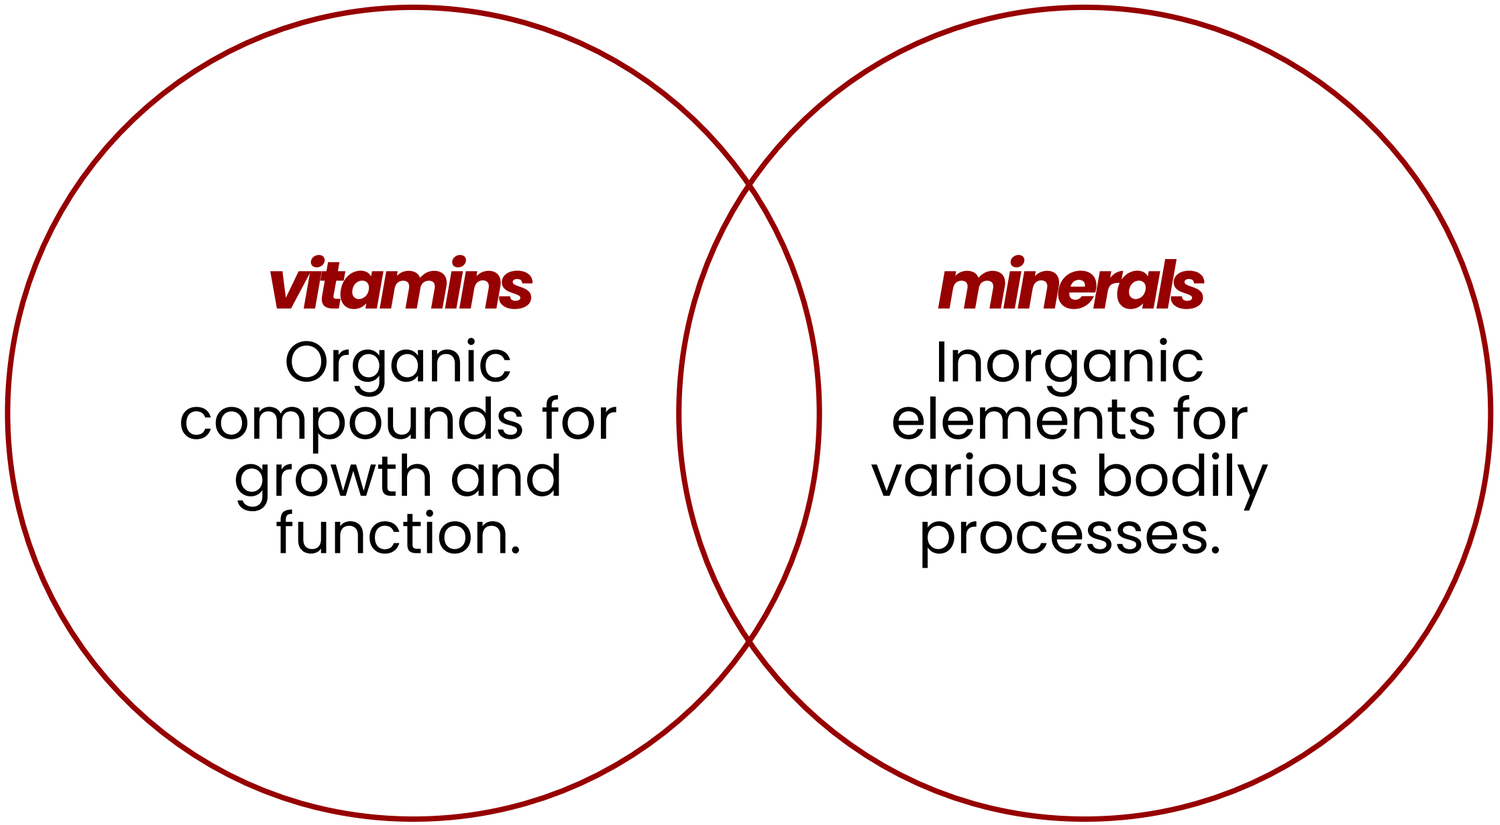

Fats

- **Energy storage, insulation, and vitamin absorption.**

They are also integral to **brain function** and **hormone production.**

Healthy fats are found in **avocados, nuts,** and **olive oil**, while trans fats, found in processed foods, should be **avoided.**

Micronutrients

Vitamins

- **organic compounds that are vital for normal cell function, growth, and development.**

They are required in small amounts but are crucial for a wide range of functions, from boosting the immune system (Vitamin C) to aiding in blood clotting (Vitamin K). - Fletcher, 2018

- **water-soluble** (e.g., B vitamins, Vitamin C) or
- **fat-soluble** (e.g., Vitamins A, D, E, and K)

Minerals

- **inorganic elements that originate from the earth and are absorbed by plants.**

They are essential for processes like **bone formation** (calcium), **nerve function** (potassium), and **oxygen transport in the blood** (iron).

Minerals such as **calcium and iron** are particularly important for active individuals to support bone density and prevent fatigue.

WATER

WATER

- **constitutes about 60% of the human body and is involved in every major bodily process.**

essential for regulating body temperature, transporting nutrients, lubricating joints, and flushing out waste products (Kleiner, 2015).

The daily water requirement varies based on an individual's activity level, climate, and overall health, but a general recommendation is around **2.7 to 3.7 liters per day for adults** (Kleiner, 2015).

PRINCIPLES OF EXERCISE AND TRAINING

Instr. ARTEMIO T. REYES, JR., LPT, MAEd
Faculty, Department of Multidisciplinary Studies
College of Management and Multidisciplinary Studies, TUP-Manila

FITT PRINCIPLE

- provides a comprehensive framework for designing individualized exercise programs
- **F**requency, **I**ntensity, **T**ime, **T**ype
- Each variable plays a crucial role in determining the effectiveness and safety of a training program

FREQUENCY

How often you exercise?

INTENSITY

How hard you exercise?

TIME

Duration of each session.

TYPE

Specific kind of activity or exercise

PRINCIPLE OF OVERLOAD

- “...for fitness improvements to occur, the body must be subjected to a **greater demand** than it is accustomed to.”
- gradually increasing exercise intensity, duration, or frequency

PRINCIPLE OF SPECIFICITY

Specific Adaptation to Imposed Demands (**SAID**)

- the body **adapts specifically** to the **type of training** performed
- underlines the importance of **aligning training** with **fitness goals**
- improve strength = strength-based exercise; improve endurance = endurance-focused training

PRINCIPLE OF RECOVERY

- **physical gains** are not made during the workout but in the **rest periods between sessions**
- during **recovery**, the body **repairs and rebuilds tissues** that were stressed during exercise, making them stronger and more resilient than before

PRINCIPLE OF RECOVERY

- **no adequate recovery =**
  overtraining

- **REST DAY**
  sufficient sleep and proper nutrition

"LISTEN TO YOUR BODY"
